

Task 13.2 System Performance Analysis Dashboard

Report

1. Overview

This dashboard provides a comprehensive analysis of system performance, anomaly behavior, and operational efficiency. It focuses on key areas such as system load, network activity, anomaly trends, response times, and escalation patterns.

2. Key Performance Indicators (KPIs)

Total Anomalies	Avg Resolution Time Min	Avg Response Time Min	Total Failed Transactions	Open Anomalies	High Severity Anomalies
100K	2.50K	0.08	952K	25K	25K

1. Total Anomalies (100K)

- **Purpose:** Measures total anomaly events detected in the system
- **Answers:**
 - How many issues occurred overall?
 - What is the system's overall stability level?

2. Avg Resolution Time (2.50K min)

- **Purpose:** Measures time taken to resolve issues
- **Answers:**
 - How long does it take to fix problems?
 - Is issue resolution efficient?

3. Avg Response Time (0.08 min)

- **Purpose:** Measures how quickly the system responds to anomalies
- **Answers:**
 - How fast is the system reacting?

- Is latency within acceptable limits?

4. Total Failed Transactions (952K)

- **Purpose:** Indicates system reliability and business impact
- **Answers:**
 - How many transactions failed?
 - What is the impact on users/business?

5. Open Anomalies (25K)

- **Purpose:** Tracks unresolved issues
- **Answers:**
 - How many issues are still pending?
 - What is the current operational workload?

6. High Severity Anomalies (25K)

- **Purpose:** Highlights critical system issues
 - **Answers:**
 - How many high-risk incidents occurred?
 - What is the severity level of system problems?
-

3. Charts & Their Purpose

A. System Performance Monitoring

1. CPU Usage Trend (Line Chart)

- **Fields:** Month vs CPU Usage Percent
- **Answers:**
 - How does system load change over time?
 - Are there any performance drops or spikes?

2. Network Traffic Trend (Line Chart)

- **Fields:** Month vs Network In & Out
- **Answers:**

- How much data is flowing through the system?
 - Are there unusual traffic patterns?
-

B. Latency & Efficiency Analysis

3. Resolution Time & Response Time by Severity (Combo Chart)

- **Fields:** Severity vs Resolution Time & Response Time
 - **Answers:**
 - Are critical issues resolved faster?
 - How does severity impact response and resolution?
-

C. Operational Load & Escalation

4. Alert Count & Retry Count by Escalation Level (Bar Chart)

- **Fields:** Escalation Level vs Alert Count & Retry Count
- **Answers:**
 - How often are issues escalated?
 - Do higher escalation levels lead to more retries?

D. Anomaly Status Distribution

5. Anomaly Status (Donut Chart)

- **Fields:** Status (Open, Closed, In Progress, Acknowledged)
 - **Answers:**
 - What proportion of issues are resolved vs pending?
 - How efficient is the resolution lifecycle?
-

4. Slicers (Filters) and Their Role

1. Date Slicer (Month, Day)

- **Purpose:** Filters data based on time
 - **Answers:**
 - What happened during a specific time period?
 - How does performance vary across months/days?
-

2. User Role Slicer

- **Purpose:** Filters data by user type
 - **Answers:**
 - Which user roles are associated with anomalies?
 - Do certain roles generate more system load?
-

3. Source Slicer

- **Purpose:** Filters by anomaly source (e.g., Server, Cloud)
 - **Answers:**
 - Where are anomalies originating from?
 - Which system component is most affected?
-

4. Anomaly Type Slicer

- **Purpose:** Filters by anomaly category
 - **Answers:**
 - What type of issues are most frequent?
 - Are certain anomaly types more severe?
-

5. Service Type Slicer

- **Purpose:** Filters based on services (API, Web, Cache, etc.)
 - **Answers:**
 - Which services are most impacted?
 - How does performance vary across services?
-

5. Dashboard Summary

The dashboard integrates performance, anomaly tracking, and operational metrics into a unified view.

- KPIs provide a quick snapshot of system health
- Charts explain trends and operational behavior
- Slicers enable focused analysis across dimensions

This structure allows users to monitor system stability, identify issues, and analyze performance efficiently.
