

Task 12.4 Marketing Performance Analysis Dashboard

Report

Overview

This dashboard provides a comprehensive analysis of marketing performance using key metrics such as:

- Customer Acquisition Cost (CAC)
- Customer Lifetime Value (CLV)
- Revenue vs Budget efficiency
- Conversion trends

The goal of this analysis is to evaluate how effectively marketing investments translate into customer acquisition, revenue generation, and long-term value.

Key Performance Indicators (KPIs)

Total Conversions: 5M

- Indicates strong campaign reach and customer acquisition.
- High volume suggests effective engagement strategies.

Total Budget: 252.64M

- Represents total marketing spend.
- Needs to be evaluated against revenue for efficiency.

Total Revenue: 500.39M

- Revenue is nearly **2x the budget**, indicating strong returns.

Customer Acquisition Cost (CAC): 50.63

- Average cost to acquire one customer.
- Needs comparison with CLV to determine sustainability.

Customer Lifetime Value (CLV): 901.52K

- Extremely high compared to CAC.
- Indicates a highly **profitable customer base**.

Campaign ROI: 0.98 (~98%)

- Indicates near doubling of investment.
- Suggests strong overall profitability.

Visual Analysis

Chart 1: Revenue vs Budget by Discount Level

Insight:

- Revenue consistently exceeds budget across all discount levels.
- No extreme spikes → performance is stable.

Key Finding:

- Increasing discounts does **not significantly boost revenue proportionally**.
- Suggests diminishing returns at higher discount levels.

Chart 2: Customer Acquisition Cost by Subscription Tier

Observation:

- CAC is almost uniform across:
 - Standard (~52)
 - Premium (~50)
 - Basic (~50)

Insight:

- The cost of acquiring different customer segments is nearly equal.

Business Implication:

- Focus should be on **higher-value tiers (Premium/Standard)** since acquisition cost is similar.

Chart 3: Total Units Sold by ROI Category

Observation:

- Units sold are fairly distributed across ROI categories.

- No strong dominance by “Excellent” category.

Insight:

- High ROI does **not directly correlate with higher sales volume**.

Concern:

- ROI metric (0–5 scale) may not reflect actual financial performance accurately.

Chart 4: Total Conversions by Discount Level

Observation:

- Conversion fluctuates across discount levels.
- Peaks around mid-range discounts (20–40%).

Insight:

- Extremely high discounts do **not guarantee higher conversions**.

Business Implication:

- Optimal discount range exists → avoid over-discounting.

Slicer Analysis

Available Filters:

- ROI Category
- Subscription Tier
- Common Keywords

Evaluation:

Subscription Tier → Useful for segmentation

ROI Category → Less relevant (based on scaled metric)

Common Keywords → Limited analytical value

Key Issues Identified

1. **Use of ROI (0–5 scale)**
 - Not a true financial metric
 - Can mislead business decisions
2. **Missing CLV Visualization**
 - Critical metric not visualized
 - Limits understanding of customer value
3. **Line Chart Usage for Non-Time Data**
 - Discount level used as continuous axis
 - Better suited for bar/column chart
4. **Dashboard Clutter**
 - Extra slicers and visuals reduce clarity

Strategic Insights

Insight 1: High Profitability Model

- CLV (901K) >> CAC (50)
- Indicates extremely high return per customer

Insight 2: Discount Optimization Needed

- Higher discounts do not guarantee better conversions
- Mid-range discounts perform better

Insight 3: Uniform Acquisition Cost

- Same CAC across tiers
- Opportunity to push **premium subscriptions**

Insight 4: Revenue Efficiency is Strong

- Revenue consistently higher than budget
- Indicates well-performing campaigns

Recommendations

Improve Dashboard

- Add **CLV by Subscription Tier** chart
- Replace line charts with **bar charts**
- Remove unnecessary slicers (ROI Category, Keywords)

Business Recommendations

- Focus on **high CLV customer segments**
- Optimize discount strategy (avoid excessive discounts)
- Invest more in **premium tier acquisition**

Analytical Improvements

- Use **real ROI calculation** instead of score
- Introduce **profitability segmentation**
- Add **conversion efficiency metrics**

Conclusion

The dashboard demonstrates strong marketing performance with high revenue generation and excellent customer value metrics. However, improvements in visualization choices and metric alignment are necessary to make it fully business-focused and decision-ready.

With minor refinements, this dashboard can become a **professional, interview-ready marketing analytics solution**.
