

Task 12.5 Website & App Analysis

Overview

This dashboard provides a comprehensive analysis of **user behavior, engagement, and conversion performance** for a website/app platform. It focuses on tracking how users interact across sessions and identifying key drop-off points in the conversion journey.

Key Performance Indicators (KPIs)

Total Users	Total Sessions	Cart Abandoned rate	Total Added to Cart	Conversion Rate %
755	1.5K	29.93%	608	28.40%

Total Users: 755

- Represents the number of unique users visiting the platform.
- Helps measure overall reach and audience size.

Total Sessions: 1.5K

- Total number of user visits.
- Indicates platform traffic and engagement frequency.

Conversion Rate: 28.40%

- Percentage of sessions that resulted in a purchase.
- Shows overall effectiveness of the platform in converting users.

Total Added to Cart: 608

- Number of sessions where users added products to the cart.
- Reflects purchase intent.

Cart Abandonment Rate: 29.93%

- Percentage of users who added items to cart but did not complete purchase.

- Highlights friction in checkout or decision-making stage.

Visual Analysis

User Conversion Funnel

- Stages:
 - **Total Sessions: 1500**
 - **Added to Cart: 608**
 - **Purchases: 426**

Insight:

- Around **40% users add items to cart**, but only **28% complete purchase**.
- Significant drop-off between cart and purchase indicates potential issues such as:
 - Checkout complexity
 - Pricing concerns
 - Payment friction

Sessions Trend Over Time

- Displays total sessions across months.

Insight:

- Gradual decline in sessions from **January to March**.
- Indicates:
 - Reduced user engagement
 - Possible seasonality or campaign drop

Conversion Rate by Device Type

- Device categories:
 - Mobile
 - Desktop
 - Tablet

Insight:

- Conversion rates are relatively balanced across devices.
- Slight variations suggest:
 - Optimization opportunities for lower-performing devices

Purchase vs Cart Activity by Device

- Compares:
 - Added to Cart
 - Purchases

Insight:

- **Mobile users show highest activity**
- However, gap between cart and purchase still exists across all devices
- Suggests need for:
 - Mobile UX optimization
 - Faster checkout flow

Slicers (Filters)

The image shows two slicer filters side-by-side. The left slicer has two sections: 'Session Type' with three checkboxes for 'High Engagement', 'Low Engagement', and 'Medium Engagement'; and 'Device_Type' with a dropdown arrow and three checkboxes for 'Desktop', 'Mobile', and 'Tablet'. The right slicer has two sections: 'Purchased' with two checkboxes for 'No' and 'Yes'; and 'Added_to_Cart' with a dropdown arrow and two checkboxes for 'No' and 'Yes'.

Session Type

- Categories:
 - High Engagement
 - Medium Engagement
 - Low Engagement

Use:

- Analyze how engagement level impacts conversion.

Device Type

- Desktop, Mobile, Tablet

Use:

- Compare performance across devices.

Purchased

- Yes / No

Use:

- Separate buyer vs non-buyer behavior.

Added to Cart

- Yes / No

Use:

- Analyze intent vs actual purchase.
-

Key Insights Summary

- Strong traffic with **1.5K sessions**, but conversion can improve
- Noticeable **drop-off at checkout stage**
- Mobile dominates traffic but still has conversion gaps
- Declining session trend indicates need for marketing push
- Cart abandonment (~30%) is a critical issue

Recommendations

- Simplify checkout process
- Improve mobile user experience
- Introduce offers/discounts to reduce cart abandonment
- Run marketing campaigns to boost declining traffic
- Analyze high engagement users for targeted strategies

Conclusion

The dashboard effectively highlights **user journey, engagement patterns, and conversion bottlenecks**. While user traffic is strong, improving the **checkout experience and reducing cart abandonment** will significantly enhance overall business performance.
